Foreword

Abstract: Today the European bioethical debate has to face the challenge of frontier issues like robotics, artificial intelligence, and moral bioenhancement. In the European scenario, the ethical debate about these issues is strictly interrelated with the legal one. The attempt is indeed to find adequate legal tools to regulate those frontier issues that can profoundly impact on the framework of fundamental rights. The present introduction to the Forum, which collects some papers dealing with different frontier issues, gives a brief overview of the contents of the papers and highlights their relevance for the public European ethical and legal discussion.

Keywords: ‘Moral’ technologies, Neuroscience, Robotics, Moral bioenhancement, Health rights.
