

# Vulnerabilità e nuove tecnologie

A cura di Carla Faralli

## Introduzione

CARLA FARALLI

### *Introduction*

*Abstract:* From a range of different perspectives and taking a cross-disciplinary angle, these contributions illustrate how the deep and fast-paced transformations tied to the development of new technologies have created opportunities but have also made for scenarios that pose new challenges for researchers when it comes to our freedoms, liberties, and obligations and the duty to protect the vulnerable. As a result of these changes, we are now confronted with critical issues making it necessary to rethink personal identity, security, and privacy, as well as to cope with “technological vulnerability” and inequalities rooted in the technological divide, and to accordingly work out the meaning of autonomy and freedom of choice.

*Keywords:* Vulnerability, ICT and biomedical technologies, Rights, Autonomy.
