

Qualche considerazione dalle scienze cognitive (e oltre)

CRISTINA MEINI

Some Considerations from Cognitive Sciences (and Beyond)

Abstract: Self-deception, both in its traditional sense and in the extension to the public dimension proposed by A.E. Galeotti, calls into question cognitive and motivational processes. I propose to sustain the literature traditionally considered with empirical research delving into different dimensions, up to self psychology and clinical psychology.

Keywords: Self-deception, Motivation, Relevance theory, Autobiographical memory, Argumentative theory of reasoning.
