*Mutant Research Styles. Women Work Evolutionism*

*Abstract:* Evolutionism, the cornerstone of biology, in recent years has expanded its explanatory criteria and included in its current paradigm a series of research fields external to the evolutionism in the past. At the end of the twentieth century feminist biologists, anthropologists, philosophers of science and historians, overcame a series of contrasts with classical darwinian thought and played a crucial role in bringing about substantial changes in its reception, interpretation and innovation. The essay moves from a case study connecting two famous authors (the geneticist of development Scott Gilbert and the feminist philosopher Donna Haraway), and analyzes the fruitful dialectic between these previously conflicting universes.

*Keywords:* Theoretical biology and society, Feminism and evolutionism, Eco-evolution.
