ANNA ICHINO

Science Denial, Conspiracy Theories, and (Ir)rationality

Abstract: In this short commentary on Luca Tambolo's recent book *Il mondo su misura*, I advance two critical considerations on one of the book's main thesis concerning the nature of science denial. The gist of both considerations is that science denial might be less irrational and incoherent as a position than the book suggests.

Keywords: Science denial, Conspiracy theories, Irrationality, Belief, Imagination.
