Gereinigte Rechtslehre. Purity of Method and Autonomy of the Object

Abstract: In the book that Di Lucia and Passerini Glazel recently devoted to Kelsen's thought, particular interest is aroused by the pages in which the two scholars reflect on the relationship established, within the theoretical framework of the pure theory of law, between the purity of method of legal science and the autonomy of law as the specific object of its knowledge. The present paper proposes an exploration of the way in which this theme intersects, from different perspectives, the complex problem of justice.

Keywords: Hans Kelsen, Pure theory of law, Politics, Sociology, Ethics.
